3-year postdoc position

Department of Ecology and Evolutionary Biology, Brown University, USA

Extinction Debt and Ecosystem Change: We seek a post-doctoral research associate, for a three-year position, in the Department of Ecology and Evolutionary Biology, Brown University for participation in a collaborative project between Dov Sax (Brown University) and Steve Jackson (University of Wyoming). This project will investigate the dynamics of species extinction at local scales, paying particular attention to lag times in species extinction, extinction debt and predictability of extinction across taxa. The project will be conducted in wetland ecosystems of the Indiana Dunes. The primary method of investigation will be analysis of plant macrofossils and pollen in sediment cores, but the project will also include a resurvey of extant vegetation, and a taxonomic

examination of plant macrofossil and pollen deposition. The project has key defined goals, but there is substantial room for independent and collaborative exploration of related topics in community ecology, paleoecology, and conservation biology. Candidates should have a Ph.D. with research experience in either ecology or paleoecology; botanical experience is desirable but not mandatory. The project will require extensive field work in the summer and some travel to the University of Wyoming. Starting salary will be \$40,000 with full benefits. Please send a CV, a brief statement of research interests, and the names and contact information for three references to Dov Sax, dov.sax@gmail.com. Review of applicants will begin on March 1 and will continue until the post is filled. We would like the postdoc to begin the position on or before May 15, 2010.
